1 Project Overview

This project is a complete online custom tailoring platform built for a real tailoring business. The goal is to digitize the traditional tailoring process by allowing customers to customize garments, save measurements, place orders, and track stitching progress online.

2 Business Vision

The primary objective is to grow a family tailoring business by providing a professional online experience. Customers can design garments, store measurements, and receive personalized service while the tailor can manage orders efficiently.

3 User Roles

3.1 Guest User

- Browse services
- View garment designs
- Learn about the business
- Register or login

3.2 Customer

- Register and login
- Customize garments
- Save measurement profiles
- Place orders
- Track orders
- Earn loyalty points
- Redeem discounts

3.3 Admin (Tailor)

- Manage orders
- View customer measurements
- Update order status
- Manage pricing and services
- Identify VIP customers

4 Services Offered

- Shirts
- Shalwar Kameez
- Kurta Pajama
- Waistcoat
- Sherwani
- 2-Piece Suit
- 3-Piece Suit

Each service includes its own customization options.

5 Customization System

The core feature of the platform is garment customization.

Examples include:

5.1 Shirt

- Collar styles
- Sleeve styles
- Front styles
- Back styles

5.2 Shalwar Kameez

- Collar styles
- Sleeve styles
- Front styles
- Shalwar types

6 Image Layer System

The website does not generate images dynamically.

Instead:

1. A base garment image is created.
2. Separate style variation images are prepared.

3. Only the selected part changes.
4. The remaining garment stays identical.

Benefits:

- Consistent appearance
- Realistic preview
- Easier customer understanding
- Accurate tailoring representation

7 Measurement Management

Customers can create and save multiple measurement profiles.

Examples:

- Office Wear
- Casual Wear
- Wedding Wear

Measurement data is copied into orders as a snapshot so future edits do not affect old orders.

8 Order Workflow

1. Select Service
2. Customize Garment
3. Choose Measurements
4. Review Order
5. Confirm Order

9 Order Status Tracking

- Pending
- Cutting
- Stitching
- Ready
- Delivered

10 Customer Dashboard

Features:

- Order History
- Measurement Profiles
- Loyalty Points
- Profile Management
- Order Tracking

11 Admin Dashboard

Features:

- View All Orders
- View Measurements
- Update Status
- Customer Insights
- Service Management
- Pricing Control

12 Loyalty and Rewards System

Customers earn points for every order.

Example:

- Rs. 2,000 Order = 20 Points
- Rs. 5,000 Order = 50 Points
- Rs. 10,000 Order = 100 Points

Points can be redeemed as discounts on future orders.

13 Membership Levels

13.1 Bronze

Normal service level.

13.2 Silver

Additional discounts and benefits.

13.3 Gold

Priority treatment and premium benefits.

14 Ramazan and Eid Priority System

One of the unique business features.

During peak seasons:

- Gold customers receive priority.
- Returning customers move ahead in queue.
- VIP customers are identified automatically.
- Tailors can manage rush orders efficiently.

Benefits:

- Better customer retention
- Improved customer satisfaction
- Efficient seasonal order management

15 Database Overview

Main collections:

- Users
- Services
- Orders
- Measurement Profiles
- Loyalty Records

16 Technology Stack

Frontend:

- React.js
- Tailwind CSS

Backend:

- Node.js
- Express.js

Database:

- MongoDB

Authentication:

- JWT
- bcrypt

17 Business Advantages

- Professional online presence
- Improved customer retention
- Better order management
- Digital measurement storage
- Premium customer experience
- Loyalty-driven growth
- Efficient Eid season handling

18 Future Expansion

Potential future upgrades:

- Multi-tailor marketplace
- Referral system
- Online payments
- Fabric selection
- AI measurement assistance
- Mobile application

19 Conclusion

This platform transforms a traditional tailoring business into a modern digital service. It combines garment customization, measurement management, loyalty rewards, and order tracking into a single professional system designed to improve customer experience and business growth.
